

PROJECT INSIGHT:

The Challenge:

- The previous storage of wire carts created inventory control issues and workflow challenges.

The Solution:

- Installed Pegasus Hygieia shelving to centralize and organize all surgical supplies.
- Dedicated shelves for each surgical case to prevent contamination.
- Airtight, washable design prevents rust and water accumulation.
- Mobile units with casters allow for easy cleaning and flexibility.

STREAMLINING SURGICAL STORAGE AT SALEM HOSPITAL

When Salem Hospital in Massachusetts began renovating its surgical storage areas, the goal was to create a more organized, efficient, and hygienic environment for managing surgical supplies. The previous setup had made it difficult to track inventory, and staff faced ongoing challenges locating items quickly and maintaining an ideal critical care environment.

Salem Hospital turned to Donnegan Systems, who provided Pegasus Hygieia shelving — a durable, space-saving solution for healthcare environments. Each shelf was assigned to a specific surgical equipment case, minimizing cross-contamination. The airtight design of the system allows for easy washing without rust or water buildup. Casters on each unit make it simple to move shelving when cleaning floors, ensuring hygiene and accessibility.
